

HEDUS 002

AMENDMENT TO THE SPECIFICATION

Please amend page 3, line 13 of the specification as follows:

Projection couplers are typically made from a metallic substance and have smooth and shiny surfaces. Projection coupler manufacturers have attempted to address the lower ~~contrac~~contrast caused by the reflections in the coupler by using different approaches. One such approach is coating the inner surface of the coupler contacting the fluid in the cooling chamber with a non-reflective substance.

The specification thus will read:

Projection couplers are typically made from a metallic substance and have smooth and shiny surfaces. Projection coupler manufacturers have attempted to address the lower contrast caused by the reflections in the coupler by using different approaches. One such approach is coating the inner surface of the coupler contacting the fluid in the cooling chamber with a non-reflective substance.
